Project Narrative

1.0 Introduction

The Boston Parks and Recreation Department (BPRD) is submitting this Request for Determination of Applicability (RDA) for the following three activities within the Phase 1 of the Muddy River Flood Damage Reduction project area:

- 1) Removal and replacement of three heritage oak trees between Brookline Avenue and Avenue Louis Pasteur. These trees are dead or dying and/or damaged beyond repair. These trees are a hazard and could result in injury to a person or damage to property,
- 2) Removal of cut sections of geocells from the Phase 1 Project on an individual basis where they are no longer providing stabilization support and are now floating above the riverbed; and
- 3) Removal of in-water herbivore fencing remaining from the Phase 1 Project that is damaged and no longer providing protection to plants. The fencing is currently trapping debris and trash and should be removed to prevent any further damage.

The heritage tree removal is subject to review by the Boston Conservation Commission under the Mass Wetlands Protection Act (MWPA)(M.G.L. c. 131, s. 40) and its implementing regulations (310 CMR 10.00)(the Regulations) and the City of Boston Ordinance Protecting Local Wetlands and Promoting Climate Change Adaptation in the City of Boston (the Ordinance) and the Boston Wetland Regulations since proposed activities will temporarily alter 25-ft Riverfront Area, 100-foot Buffer Zone, and the locally jurisdictional Waterfront Area. Removal of heritage trees is not an ongoing maintenance activity pursuant to the Order of Conditions for the Phase 1 of the Muddy River Flood Damage Reduction Project and therefore the BRPD is filing this RDA.

2.0 Existing Conditions

A site inspection for wetland resource areas was conducted by Magdalena H. Lofstedt, PWS, on April 30, 2021. Existing field-delineated wetlands resource boundaries were evaluated for conformance with the Massachusetts Wetlands Protection Act (MGL c.131, s.40) (MWPA) and Regulations (310 CMR 10.00), the U.S. Army Corps of Engineers 1987 Wetlands Delineation Manual (Environmental Laboratory, 1987), and the U.S. Army Corps of Engineers 2011 Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Northcentral and Northeast Region (Version 2.0).

The following wetland resource areas are present within the Phase 1 Muddy River Project as shown on Sheets C-101A-A, C-102A-A, C-103A-A, and C-104A-A in Appendix C.

2.1 Wetland Resource Areas Regulated by Mass Wetlands Protection Act (M.G.L. c. 131 §40) and Regulations (310 CMR 10.00)

2.1.1 Inland Bank

Inland Bank is defined as:

“That portion of land surface which normally abuts and confines a water body. It occurs between a water body and a vegetated bordering wetland and adjacent floodplain, or in the absence of these, it occurs between a water body and an upland.” [310 CMR 10.55]

The boundary of Inland Bank is defined as:

“the first observable break in the slope or the mean annual flood level, whichever is lower.” [310 CMR 10.54(2) (c)]

The water elevations in the Muddy River from Charlesgate to Leverett Pond are regulated as part of water surface management at the Charles River dam and therefore there are no mean annual flood or mean annual low water flow levels. Therefore, an elevation for the upper and lower bank was determined from historical water elevation measurements and consistent with the Determination of Applicability issued for Muddy River Flood Damage Reduction Project – Phase 2 project area on May 17, 2018. The lower limit of bank is at elevation 7.7 feet Boston City Base (BCB) (shown in red on the Project Plans in Appendix C) and the upper limit of bank is at elevation 8.5 feet BCB (shown in orange on the Project Plans in Appendix C).

2.1.2 Land Under Water

Land Under Water is (LUW) defined as:

“...The boundary of Land Under Water Bodies and waterways is the mean annual low water level.” 310 CMR 10.56(2)

LUW is present below the lower limit of bank at elevation 7.7 feet (BCB).

2.1.3 Riverfront Area

Riverfront Area (RFA) is defined as:

“the area of land between a river’s mean annual high-water line and a parallel line measured horizontally outward from the river and a parallel line located 200 feet away, except that the parallel line is located: a) 25 feet away in Boston...” [310 CMR 10.58 (2) a]

The City of Boston has a 25-ft Riverfront Area as shown in pink on the Project Plans in Appendix C.

2.1.4 Bordering Land Subject to Flooding (BLSF)

BLSF is defined as:

“an area with low, flat topography adjacent to and inundated by flood waters rising from creeks, rivers, streams, ponds or lakes. It extends from the banks of these waterways and water bodies.” [310 CMR 10.57]

The FEMA Flood Insurance Rate Map (FIRM) of the project area (25025C0076G) identifies the 100-year floodplain (Zone AE) in the project area at elevation 16.46 ft BCB. This elevation extends beyond the project area limits therefore the entire project area is located within BLSF.

2.2 Wetland Resource Areas Regulated by the Ordinance

The Ordinance regulates activities within Coastal Beach, LSCSF, and Coastal Bank, and the local Waterfront Area:

2.2.1 Waterfront Area

Waterfront Area is “the portion of the buffer zone which extends twenty-five (25) feet horizontally from the edge of any inland bank, lake, pond, intermittent stream, brook, creek or riverfront area.” Waterfront Area is important for the protection of adjacent wetland resource areas and for public access to the waterfront.

The portion of the buffer zone which extends twenty-five (25) feet horizontally from the edge of the following wetland resource areas: 1. Any coastal beach, dune, bank, tidal flats, rocky intertidal shores, salt marshes or land containing shellfish; or 2. Any inland bank, lake, pond, intermittent stream, brook, creek, or riverfront area.

The Waterfront Area is shown green on the Project Plans in Appendix C.

3.0 Proposed Work

The three heritage trees are located within a landscaped area between the Muddy River and the sidewalk off the Fenway. Prior to start of work, construction fencing will be installed around the work area and compost logs will be installed at the limits of work to prevent sediment from entering the Muddy River. Trees will be removed and disposed of, and stumps grinded to a minimum of 12 inches below grade. The disturbed area will be restored to preconstruction grades with loam and seeded with lawn seed mixture. The proposed work is not anticipated to result in an adverse impact on wetland resource areas.

Removal of cut sections of geocells and in-water herbivore fencing will be done manually (i.e., without using machinery) to minimize disturbance to the riverbed and existing vegetation.

4.0 Construction Mitigation Measures

The following summary of mitigation measures will be implemented to protect the Muddy River wetland resource areas during and after construction.

Sedimentation and Erosion Control Measures During Construction

Prior to commencement of construction, compost logs will be installed at the limits of work for the tree removal to prevent the transport of sediment to outside of the work area.

Spill Control Measures

- Spill containment equipment (e.g., oil absorbent pads, oil absorbent materials, containment booms, shovels, etc.) will be stored in the equipment storage and refueling area in an easily accessible manner for use in the clean-up of accidental releases of fuel, hydraulic fluid, or other hazardous materials. Should there be an accidental release the proper authorities will be notified in accordance with all applicable federal, state, and local laws.
- To minimize the possibility of hydraulic fluid leaks, all hydraulic lines on all construction equipment and vehicles will be inspected at the end of each workday. If any excessive wear

or leakage is observed, the line will be repaired prior to further use. In addition, a supply of oil absorbent materials (i.e., pads, "speedy dry," and/or booms) will be maintained with the equipment at the work area for immediate deployment in the event of an accidental release of fuel, hydraulic fluid, oil, etc.

Post Construction Measures

The following summary of mitigation measures will be implemented to restore any areas affected by short-term impacts that occur in or adjacent to the Muddy River.

- Upon completion of the tree work, the disturbed lawn area will be regraded to match existing contours, supplemented with a minimum of 6 inches of topsoil and seeded with a lawn seed mixture.
- The compost log barrier will not be removed until disturbed areas are revegetated and stabilized.

5.0 Climate Change Considerations

Removing the three heritage trees that are dead or dying and/or damaged beyond repair and replacing them with new healthy trees is a climate resilient measure as trees improve both air and water quality, prevent erosion, lower air temperature, and provide wildlife habitat.

The proposed removal of cut sections of geocells and in-water herbivore fencing is part of the Muddy River Phase 1 maintenance and/or post construction activities. The Muddy River Restoration is part of the Resilient Boston and Climate Ready Boston planning initiative. The restoration of Muddy River promotes climate resiliency by reducing impacts from floodwaters, improving water quality, enhancing aquatic/riparian habitat which will contribute to preventing erosion and sedimentation.

6.0 Summary

The BPRD requests a Negative Determination for the removal and replacement of three heritage oak trees, and the removal of geocell and in-water herbivore fencing as described above. All work will be completed in compliance with the MWPA and the Regulations, and the Ordinance and Boston Wetland Regulations.
